Secure Swap

The first DEX that brings speed, liquidity and leverage trading!

State of the market:

Centralized exchangers face a security problem because of the cryptocurrencies stored there by their users. They also have a predominant control over the crypto-currency market. This control creates a risk of availability, as these exchangers can be suddenly banned by regulators.

Decentralised exchangers are unable to take market share from centralised exchangers (less than 1% of the total volume of trades). The main reasons are their lack of liquidity, slowness, lack of ergonomics, higher costs and the absence of leverage trading.

Secure Swap:

The first DEX capable of competing with centralized exchangers:
Secure Swap provides the answer to the weaknesses of exchangers, whether centralized or decentralized, and without their disadvantages.

- High liquidity available at launch
- All the nodes presented below will be available under Open-Source license
- Speed of execution unknown on current DEXs.
- A neat ergonomics, thanks to its Secure Trade client application
- Crypto-agnostic, able to interconnect to any Blockchain
- A security of exchanges coming from conception.

Advanced trading tools, some of which do not exist on current DEXs or centralized exchangers:

- Trading on the chart
- Advanced orders (OCO, trigger conditions, multiple branches)
- Money management assistance
- Scalping assistance, by executing pre-configured orders
- Leverage trading
- Automatic trading module, with strategy editor

A community ecosystem, a source of income:
Secure Swap consists of Secure Trade, our cross-platform trading client application, and micro-services such as:

- Gateway nodes to crypto-currencies, which form the backbone of the ecosystem's p2p network
- Arbitration nodes, providing liquidity by exploiting the liquidity of centralized exchangers
- Leverage trading nodes, allowing margin trading with leverage effect
- Conversion nodes to fiat currencies
- Members of the Secure Swap community, who will operate these nodes, will benefit from it.
Roadmap :

Nov-Jan 2018	Feb-Mar 2018	April-June 2018	Jul-August 2018	Sept-Oct 2018	Nov-Dec 2018	Jan-Apr 2019
Preliminary idea and design	Market research	Project definition	Team building	ICO dev. and documentation	Pre-ICO	ICO

Distribution of Founds

These graphs show the distribution of the matching funds to the two milestones: Soft ceiling reached and Fixed ceiling reached.
We will apply an intermediate distribution in proportion to the funds raised.

Pie chart 1:
Arbitration 22%, Marketing 22%, Legal 8%, Pentests & Bounty 11%, Reserve funds 7%, Development 30%

Pie chart 2:
Exploitation Fiat 15%, Leverage trading 13%, Marketing 15%, Development 10%, Arbitration 31%, Pentests & Bounty 7%, Reserve funds 6%, Legal 3%

ICO Details

Created SSW tokens:	100 000 000
One token price in USD:	0,45 $
Reserved to the team:	10 %
Reserved to advisors:	3 %
Reserved to animators:	3 %
Reserved to partners:	4 %
Available for the ICO:	80 %
Soft-Cap:	10 000 000
Hard-Cap:	80 000 000
Accepted currency:	ETH
